***EXAMINER'S AMENDMENT***

1. This Office Action is made in response to applicant's RESPONSE TO ELECTION REQUIREMENT AND AMENDMENT, filed on 12/29/2006.
2. Applicant's election **without** traverse of Group A (claims 1-11) and Species 1A (claims 1-3 and 6) illustrated in figures 1-6 in the reply filed on 12/29/2006 is acknowledged. Claim 1 is generic and allowable. Accordingly, claims 4, 5 and 7-11, directed to non-elected species, are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowable generic claim.
3. This application is in condition for allowance except for the presence of claims 12-20 directed to an invention non-elected without traverse. Accordingly, claims 12-20 have been cancelled.
4. The application has been amended as follows:  
  
In the claim:  
  
**Claims 12-20: cancelled.**

***REASONS FOR ALLOWANCE***

5. The following is an examiner's statement of reasons for allowance: the claimed invention is directed to a digital/analog conversion device outputting an analog voltage according to digital data of a plurality of weighted bits. Independent claim 1 identifies the uniquely distinct features, "said charge pump circuit including ... a switch element connected between said second node and said output node to be turned on at a timing at which said first transition edge of each of said pulses is transmitted to said first node and turned off at a timing at which said second transition edge thereof is transmitted to said first node and a bias circuit changing, according to the change

of the voltage on said output node, a voltage on said second node with the same polarity as that of the change of the voltage on said output node", presently recited in last 9 lines. The closest prior arts, Frank et al. (US 6,157,332, see Fig. 1) disclosing a digital/analog conversion device (an integrated self-calibrating DAC 100; Fig. 1; col. 2, lines 1-2), which comprises a pulse number control circuit (a circuit including elements 102 and 104; see Fig. 1) and a charge pump circuit (a variable reference voltage generator 106), and Da Franca et al. (EP 0 604 397, cited in IDS filed on 02/01/2007) disclosing a digital/analog conversion device (a device shown in Fig. 6), which comprises a pulse number control circuit (a circuit including elements CS0-CSw-1, SA0-SAw-1; see Fig. 6) and a charge pump circuit (a circuit including elements C, S0, OA, CF, SF, and their connections; see Fig. 6), either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
